

UI firmware R0.1.05-R0.0.49

1. Filter uploaded jobs to remove incompatible jobs plus regenerate thumbs when missing or incompatible.
2. Add better status update when loading, saving jobs and log files. Finer details are logged in the debug logs.
3. Filter out and delete jobs with bad thumbnail files so they do not cause a server crash.
4. Add popup to Save and Print on Job Reprint to let user know action underway. Display can be slow to update while the request is being processed making it appear button press was not recognized.
5. Extract profile name and display under 'I' Information for a Reprint print job. 'I' icon now always visible and will show any color adjustments, or 0 if not changed.
6. Add rPI revision to debug logs at boot time to enable future tracking of rPI installed model
7. Add displaying of localized profile name, if contained in captured job, using current printer display language.
8. Improve performance when switching between views in Job Reprint.
